

# Measuring Guide - Thermoguard

We've created this guide so that you can quickly and easily measure your Garage space and order the correct door for your needs. Simply download and print out this document, record all of your measurements using a pen whilst in your Garage, and then reference your findings when ordering through the Roller Door Store website.

**Please note:** All measurements are to be taken in millimetres, and should be taken from multiple places, and the smallest measurement used. Please also make us aware of any heating pipes, water pipes, ducts, electrical cables or anything else that may impede the installation of your new door.
